

COMMUNITY MEETING

Traction Power Substation in the Hydro Corridor

On August 14, 2018, the TTC, the City and Hydro One held a community meeting, for the Scarborough Subway Extension, to update your neighbourhood on the location of the traction power substation. The substation will be built in the Hydro Corridor off McCowan Road and south of Bellechasse Street. The traction power substation is required to provide power to the future Scarborough Subway Extension.

You and your family are invited to a follow-up Community Meeting to learn more on the updated design, lighting and landscaping for the substation. You will also:

- hear what residents told us at the August 2018 public meeting and how staff responded to issues,
- learn about TTC's plans to manage construction impacts and the TTC's Community Liaison program,
- review and provide comments on the updated designs, and
- ask questions and provide your input to TTC and City staff.

The Scarborough Subway Extension project is a 6.2 km extension of Line 2 from Kennedy Station to Scarborough Centre, via Eglinton Avenue, Danforth Road and McCowan Road. The extension will create a seamless journey for customers by eliminating the transfer at Kennedy Station. The Line 2 extension was approved by Toronto Council in 2013 and will replace the aging Line 3 Scarborough RT line.
